Intelligent Soft Licenses SpeedTree® RT for *Ragnesis Online*

COLUMBIA, SC – Intelligent Soft, a Nevis firm, has licensed SpeedTree® RT for the PC-based MMORPG *Ragnesis Online*.

Igor Forrest Kokorine, director, praised SpeedTree’s large library of quality trees and the middleware’s comprehensive architecture.

“SpeedTreeCAD was extremely useful for creating new species, as well as trying out various tree ideas with different wind and illumination settings,” said Igor. “Because SpeedTree made the trees relatively quick and easy to program, we were able to concentrate on other aspects of the project.”

Ragnesis Online consists of a world that has no analogue, has unique characters, monsters and a plot presenting incredible opportunities for game play. There is simultaneous development of the game and of the first book of a series of books about the Ragnesis world. The second book will include some real stories from the game in which the best player clans will participate. Players will have a chance to see their own the names on the pages of the book along with summaries of events in which they participated. The game will also have a unique system of awarding the players, considerably reducing monthly payments and even allowing some to play free of charge. The release of the game is planned for the 4th quarter of 2006. The publisher of the game in the USA and Europe will be the special division of the investment company ICN Holding Inc. - one of the investors of the project.

Intelligent Soft LLC is an independent game developer with a base office in New Jersey and collective colleagues from several countries. Intelligent Soft LLC is working on its first serious title, *Ragnesis Online*.

SpeedTreeRT, winner of the 2005 Front Line Award for middleware, delivers highly realistic trees and plants, with adjustable wind effects, user-configurable and seamless LOD transitions, and an included library of hundreds of tree, plant and marine models representing more than 170 core species. SpeedTreeRT includes SpeedTreeCAD, a Windows application used to create and edit animated trees in real-time.

Interactive Data Visualization, Inc. (IDV), develops software products with a focus on real-time three dimensional applications for the game development, visual simulation, engineering visualization, and animation industries. IDV, a privately held corporation, was founded in 1999 in Columbia, South Carolina. For more information about IDV, visit www.idvinc.com.
